PSEUDOCODE SENDER

```
parameters = pika.URLParameters(url)
connection = pika.BlockingConnection(parameters)
channel = connection.channel()

channel.basic_publish(exchange='',
                     routing_key='Topic1',
                     body='Hello World!')
```

PSEUDOCODE RECEIVER

```
parameters = pika.URLParameters(url)
connection = pika.BlockingConnection(parameters)
channel = connection.channel()
channel.queue_declare(queue= Topic1')
channel.basic_consume(queue= Topic1',
                      on_message_callback=callback,
                      auto_ack=True)
```

PSEUDOCODE RECEIVER (CONT.)

```
def callback(ch, method, properties, body):  
    print(f" [x] Received {body}")
```

HOW IT CAN BE USED IN SIMULATION

- Real-time data in simulations
- Communication between two different co-simulations
- Communication of data to visualization programs
- Send data for storing in database
